EMAIL INVESTIGATION

Email footprint report

Where this address appears: data breaches, registered accounts, linked profiles and the state of the mailbox, compiled from open sources.

SUBJECT

test@mailinator.com

REPORT ID	SEARCH TYPE	GENERATED	PAGES
TF-EXAMPLE-0001	Email	Nov 01, 2026 · 11:34 UTC	30

CONTENTS

01	Summary	2
02	Data breaches	3
03	Online accounts	23
04	Method and limitations	30

Confidential. This report contains personal data compiled from open sources; store and share it only as data protection law and your purpose allow.

01

Summary

The findings at a glance. Each point is detailed in the sections that follow.

EXPOSURE LEVEL	DATA BREACHES	RECORDS EXPOSED	ACCOUNTS
High	**252**	**12.7B**	**96**
From breaches and accounts	0 sensitive	Across all breached datasets	15 with profile data

Key findings

- The address appears in **252** data breach(es); the most recent is **Manchester Airports Group** (Aug 27, 2026).
- Most frequently exposed data: **Email addresses** (251), **Passwords** (191), **Names** (136), **Usernames** (107), **IP addresses** (93).
- An account is registered with this address on **96** platform(s): Airtable, Aliexpress, Alsscan, Amocrm, Ancestry, Anilist and 90 more.
- The address belongs to a **disposable (throwaway) mail provider**; it is likely shared or short-lived.
- It is a **role address** (such as info@ or test@), not necessarily one person's mailbox.
- The domain has **no working mail server** (MX records), so mail to it cannot be delivered.

Identifiers found in account profiles

FIELD	VALUE	FOUND ON
Name	w00	Typeform
Username	angularAnonymous2020	Github
Username	testK7r	Beatstars
Email	test@mailinator.com	Notion

Address checks

Domain accepts mail (MX)	No
Valid address syntax	Yes
Mailbox reachable	Unknown
Disposable provider	Yes
Role address	Yes
Free mail provider	No
Domain	mailinator.com

02

Data breaches

The address appears in **252** breach(es), together exposing **12,670,575,262** records. Newest first; details for the most significant follow the table.

Breach details

The 25 most significant breaches (sensitive and largest first). All breaches are listed in the table above and in the JSON and CSV exports.

Synthient Credential Stuffing Threat Data

Verified

breached Apr 11, 2025 · 1,957,476,021 records

Email addresses · Passwords

During 2025, the threat-intelligence firm Synthient aggregated 2 billion unique email addresses disclosed in credential-stuffing lists found across multiple malicious internet sources. Comprised of email addresses and passwords from previous data breaches, these lists are used by attackers to compromise other, unrelated accounts of victims who have reused their passwords. The data also included 1.3 billion unique passwords, which are now searchable in Pwned Passwords. Working to turn breached data into awareness, Synthient partnered with HIBP to help victims of cybercrime understand their exposure.

Collection #1

breached Jan 07, 2019 · 772,904,991 records

Email addresses · Passwords

In January 2019, a large collection of credential stuffing lists (combinations of email addresses and passwords used to hijack accounts on other services) was discovered being distributed on a popular hacking forum. The data contained almost 2.7 billion records including 773 million unique email addresses alongside passwords those addresses had used on other breached services. Full details on the incident and how to search the breached passwords are provided in the blog post The 773 Million Record "Collection #1" Data Breach.

Verifications.io

Verified

verifications.io · breached Feb 25, 2019 · 763,117,241 records

Dates of birth | Email addresses | Employers | Genders | Geographic locations | IP addresses | Job titles | Names | Phone numbers | Physical addresses

In February 2019, the email address validation service verifications.io suffered a data breach. Discovered by Bob Diachenko and Vinny Troia, the breach was due to the data being stored in a MongoDB instance left publicly facing without a password and resulted in 763 million unique email addresses being exposed. Many records within the data also included additional personal attributes such as names, phone numbers, IP addresses, dates of birth and genders. No passwords were included in the data. The Verifications.io website went offline during the disclosure process, although an archived copy remains viewable.

Onliner Spambot

Verified Spam list

breached Aug 28, 2017 · 711,477,622 records

Email addresses | Passwords

In August 2017, a spambot by the name of Onliner Spambot was identified by security researcher Benkow mo□u□q. The malicious software contained a server-based component located on an IP address in the Netherlands which exposed a large number of files containing personal information. In total, there were 711 million unique email addresses, many of which were also accompanied by corresponding passwords. A full write-up on what data was found is in the blog post titled Inside the Massive 711 Million Record Onliner Spambot Dump.

Data Enrichment Exposure From PDL Customer

Verified

breached Oct 16, 2019 · 622,161,052 records

Email addresses | Employers | Geographic locations | Job titles | Names | Phone numbers | Social media profiles

In October 2019, security researchers Vinny Troia and Bob Diachenko identified an unprotected Elasticsearch server holding 1.2 billion records of personal data. The exposed data included an index indicating it was sourced from data enrichment company People Data Labs (PDL) and contained 622 million unique email addresses. The server was not owned by PDL and it's believed a customer failed to properly secure the database. Exposed information included email addresses, phone numbers, social media profiles and job history data.

Exploit.In

breached Oct 13, 2016 · 593,427,119 records

Email addresses | Passwords

In late 2016, a huge list of email address and password pairs appeared in a "combo list" referred to as "Exploit.In". The list contained 593 million unique email addresses, many with multiple different passwords hacked from various online systems. The list was broadly circulated and used for "credential stuffing", that is attackers employ it in an attempt to identify other online systems where the account owner had reused their password. For detailed background on this incident, read Password reuse, credential stuffing and another billion records in Have I Been Pwned.

Anti Public Combo List

breached Dec 16, 2016 · 457,962,538 records

Email addresses | Passwords

In December 2016, a huge list of email address and password pairs appeared in a "combo list" referred to as "Anti Public". The list contained 458 million unique email addresses, many with multiple different passwords hacked from various online systems. The list was broadly circulated and used for "credential stuffing", that is attackers employ it in an attempt to identify other online systems where the account owner had reused their password. For detailed background on this incident, read Password reuse, credential stuffing and another billion records in Have I Been Pwned.

River City Media Spam List

Verified | Spam list

rivercitymediaonline.com · breached Jan 01, 2017 · 393,430,309 records

Email addresses | IP addresses | Names | Physical addresses

In January 2017, a massive trove of data from River City Media was found exposed online. The data was found to contain almost 1.4 billion records including email and IP addresses, names and physical addresses, all of which was used as part of an enormous spam operation. Once de-duplicated, there were 393 million unique email addresses within the exposed data.

Combolists Posted to Telegram

Verified

breached May 28, 2024 · 361,468,099 records

Email addresses | Passwords | Usernames

In May 2024, 2B rows of data with 361M unique email addresses were collated from malicious Telegram channels. The data contained 122GB across 1.7k files with email addresses, usernames, passwords and in many cases, the website they were entered into. The data appears to have been sourced from a combination of existing combolists and info stealer malware.

ALIEN TXTBASE Stealer Logs

Stealer log | Verified

breached Feb 15, 2025 · 284,132,969 records

Email addresses | Passwords

In February 2025, 23 billion rows of stealer logs were obtained from a Telegram channel known as ALIEN TXTBASE. The data contained 284M unique email addresses alongside the websites they were entered into and the passwords used. This data is now searchable in HIBP by both email domain and the domain of the target website.

Wattpad

Verified

wattpad.com · breached Jun 29, 2020 · 268,765,495 records

Bios | Dates of birth | Email addresses | Genders | Geographic locations | IP addresses | Names | Passwords | Social media profiles | User website URLs | Usernames

In June 2020, the user-generated stories website Wattpad suffered a huge data breach that exposed almost 270 million records. The data was initially sold then published on a public hacking forum where it was broadly shared. The incident exposed extensive personal information including names and usernames, email and IP addresses, genders, birth dates and passwords stored as bcrypt hashes.

Deezer

Verified

deezer.com · breached Apr 22, 2019 · 229,037,936 records

Dates of birth | Email addresses | Genders | Geographic locations | IP addresses | Names | Spoken languages | Usernames

In late 2022, the music streaming service Deezer disclosed a data breach that impacted over 240M customers. The breach dated back to a mid-2019 backup exposed by a 3rd party partner which was subsequently sold and then broadly redistributed on a popular hacking forum. Impacted data included 229M unique email addresses, IP addresses, names, usernames, genders, DoBs and the geographic location of the customer.

CitOday

cit0day.in · breached Nov 04, 2020 · 226,883,414 records

Email addresses | Passwords

In November 2020, a collection of more than 23,000 allegedly breached websites known as CitOday were made available for download on several hacking forums. The data consisted of 226M unique email address alongside password pairs, often represented as both password hashes and the cracked, plain text versions. Independent verification of the data established it contains many legitimate, previously undisclosed breaches. The data was provided to HIBP by dehashed.com.

Synthient Stealer Log Threat Data

Stealer log | Verified

breached Apr 11, 2025 · 182,962,095 records

Email addresses | Passwords

During 2025, Synthient aggregated billions of records of "threat data" from various internet sources. The data contained 183M unique email addresses alongside the websites they were entered into and the passwords used. After normalising and deduplicating the data, 183 million unique email addresses remained, each linked to the website where the credentials were captured, and the password used. This dataset is now searchable in HIBP by email address, password, domain, and the site on which the credentials were entered.

Zynga

Verified

zynga.com · breached Sep 01, 2019 · 172,869,660 records

Email addresses | Passwords | Phone numbers | Usernames

In September 2019, game developer Zynga (the creator of Words with Friends) suffered a data breach. The incident exposed 173M unique email addresses alongside usernames and passwords stored as salted SHA-1 hashes. The data was provided to HIBP by dehashed.com.

LinkedIn

Verified

linkedin.com · breached May 05, 2012 · 164,611,595 records

Email addresses | Passwords

In May 2016, LinkedIn had 164 million email addresses and passwords exposed. Originally hacked in 2012, the data remained out of sight until being offered for sale on a dark market site 4 years later. The passwords in the breach were stored as SHA1 hashes without salt, the vast majority of which were quickly cracked in the days following the release of the data.

Dubsmash

Verified

dubsmash.com · breached Dec 01, 2018 · 161,749,950 records

Email addresses | Geographic locations | Names | Passwords | Phone numbers | Spoken languages | Usernames

In December 2018, the video messaging service Dubsmash suffered a data breach. The incident exposed 162 million unique email addresses alongside usernames and PBKDF2 password hashes. In 2019, the data appeared listed for sale on a dark web marketplace (along with several other large breaches) and subsequently began circulating more broadly.

Adobe

Verified

adobe.com · breached Oct 04, 2013 · 152,445,165 records

Email addresses | Password hints | Passwords | Usernames

In October 2013, 153 million Adobe accounts were breached with each containing an internal ID, username, email, encrypted password and a password hint in plain text. The password cryptography was poorly done and many were quickly resolved back to plain text. The unencrypted hints also disclosed much about the passwords adding further to the risk that hundreds of millions of Adobe customers already faced.

MyFitnessPal

Verified

myfitnesspal.com · breached Feb 01, 2018 · 143,606,147 records

Email addresses | IP addresses | Passwords | Usernames

In February 2018, the diet and exercise service MyFitnessPal suffered a data breach. The incident exposed 144 million unique email addresses alongside usernames, IP addresses and passwords stored as SHA-1 and bcrypt hashes (the former for earlier accounts, the latter for newer accounts). In 2019, the data appeared listed for sale on a dark web marketplace (along with several other large breaches) and subsequently began circulating more broadly.

Canva

Verified

canva.com · breached May 24, 2019 · 137,272,116 records

Email addresses | Geographic locations | Names | Passwords | Usernames

In May 2019, the graphic design tool website Canva suffered a data breach that impacted 137 million subscribers. The exposed data included email addresses, usernames, names, cities of residence and passwords stored as bcrypt hashes for users not using social logins.

Exactis

Verified

exactis.com · breached Jun 01, 2018 · 131,577,763 records

Credit status information | Dates of birth | Education levels | Email addresses | Ethnicities | Family structure | Financial investments | Genders | Home ownership statuses | Income levels | IP addresses | Marital statuses | Names | Net worths | Occupations | Personal interests | Phone numbers | Physical addresses | Religions | Spoken languages

In June 2018, the marketing firm Exactis inadvertently publicly leaked 340 million records of personal data. Security researcher Vinny Troia of Night Lion Security discovered the leak contained multiple terabytes of personal information spread across hundreds of separate fields including addresses, phone numbers, family structures and extensive profiling data. The data was collected as part of Exactis' service as a "compiler and aggregator of premium business & consumer data" which they then sell for profiling and marketing purposes. A small subset of the exposed fields were provided to Have I Been Pwned and contained 132 million unique email addresses.

Apollo

Verified

apollo.io · breached Jul 23, 2018 · 125,929,660 records

Email addresses | Employers | Geographic locations | Job titles | Names | Phone numbers | Salutations | Social media profiles

In July 2018, the sales engagement startup Apollo left a database containing billions of data points publicly exposed without a password. The data was discovered by security researcher Vinny Troia who subsequently sent a subset of the data containing 126 million unique email addresses to Have I Been Pwned. The data left exposed by Apollo was used in their "revenue acceleration platform" and included personal information such as names and email addresses as well as professional information including places of employment, the roles people hold and where they're located. Apollo stressed that the exposed data did not include sensitive information such as passwords, social security numbers or financial data. The Apollo website has a contact form for those looking to get in touch with the organisation.

DemandScience by Pure Incubation

Verified

demandscience.com · breached Feb 28, 2024 · 121,796,165 records

Email addresses | Employers | Job titles | Names | Phone numbers | Physical addresses | Social media profiles

In early 2024, a large corpus of data from DemandScience (a company owned by Pure Incubation), appeared for sale on a popular hacking forum. Later attributed to a leak from a decommissioned legacy system, the breach contained extensive data that was largely business contact information aggregated from public sources. Specifically, the data included 122M unique corporate email addresses, physical addresses, phone numbers, employers and job titles. It also included names and for many individuals, a link to their LinkedIn profile.

Gravatar

Verified

gravatar.com · breached Oct 03, 2020 · 113,990,759 records

Email addresses | Names | Usernames

In October 2020, a security researcher published a technique for scraping large volumes of data from Gravatar, the service for providing globally unique avatars . 167 million names, usernames and MD5 hashes of email addresses used to reference users' avatars were subsequently scraped and distributed within the hacking community. 114 million of the MD5 hashes were cracked and distributed alongside the source hash, thus disclosing the original email address and accompanying data. Following the impacted email addresses being searchable in HIBP, Gravatar release an FAQ detailing the incident.

Pemiblanc

pemiblanc.com · breached Apr 02, 2018 · 110,964,206 records

Email addresses | Passwords

In April 2018, a credential stuffing list containing 111 million email addresses and passwords known as Pemiblanc was discovered on a French server. The list contained email addresses and passwords collated from different data breaches and used to mount account takeover attacks against other services. Read more about the incident.

Method and limitations

This report was generated by TraceFind (tracefind.info) from search TF-EXAMPLE-0001 on November 01, 2026 at 11:34 UTC. It reflects what the sources returned at that time.

Results come from public and third-party open sources: breach notification datasets, platform sign-up and contact lookups, and public profile pages. Platforms answer whether an account exists; the account holder is not contacted or notified.

Sources can be incomplete, out of date or wrong, and a matching identifier does not by itself prove two accounts belong to the same person. Verify findings before relying on them.

Use this report only for lawful purposes such as security research, fraud prevention, due diligence or protecting your own data, and handle it as personal data under the law that applies to you. TraceFind gives no warranty as to its accuracy or completeness. The full data is available in the JSON and CSV exports.
